

AI Voice Concierge and Customer Intelligence Proposal for the London Store

A phased plan to ensure every store enquiry is answered, every interaction is captured into CRM, and offline demand becomes a measurable growth asset for VIVAIA UK.

London store focus

Phase 1: AI voice + CRM tagging

Phase 2: Offline-to-online retargeting

Prepared as a strategic proposal based on VIVAIA's public brand, store and sustainability materials. The objective is to help VIVAIA UK improve customer responsiveness while building a stronger first-party data foundation.

EXECUTIVE SUMMARY

The opportunity

VIVAIA already has strong momentum in London. The next opportunity is not only to answer store enquiries more effectively, but to turn those conversations into structured customer intelligence.

Every call

answered with approved store and product responses

Every enquiry

captured as structured first-party data

Every pattern

tagged for reporting and customer analysis

Every store signal

ready to feed future remarketing and growth

Why this matters now

London is already strategic. The missing layer is customer intelligence.

What VIVAIA likely sees today

- Calls and enquiries entering the London store with uneven capture quality
- High-value intent hidden inside routine questions like stock, fit, returns and directions
- Store traffic and phone traffic that are difficult to connect to later online behaviour
- Limited structured data on what customers actually ask before they buy

Public VIVAIA London store image used to anchor the proposal around the live retail environment this pilot would support.

PHASE 1

AI voice concierge + CRM intelligence layer

Phase 1 solves an immediate operational need while laying the foundation for deeper customer analysis. The AI voice layer answers inbound London store enquiries, captures data into CRM, tags the reason for the call and produces reporting that helps VIVAIA understand demand patterns more clearly.

What it does

Answer and capture

- Answers common London store enquiries instantly
- Uses approved brand-safe responses
- Escalates complex queries to staff when needed
- Creates or updates CRM records automatically
- Tags each enquiry by reason, product interest and customer need

Phase 1 makes sure every conversation becomes usable data, not just a handled phone call.

What it answers

Store-ready enquiry coverage

- Store hours, directions and Westfield location details
- Product availability and category enquiries
- Size, fit, wide-foot and comfort questions
- Returns, exchanges and care guidance
- New arrivals, restock requests and assisted shopping interest

Calls outside normal staffing availability are still answered, captured and routed appropriately.

Customer data design

What the CRM should capture and analyse

1

Identity
Name, phone number, time of call, store location and whether a follow-up is needed.

2

Intent
Reason for the call, category of interest, specific product mentioned and store visit intent.

3

Need state
Fit issue, pain point, comfort need, wide-foot query, style use case or occasion context.

4

Outcome
Whether the enquiry was resolved, escalated, linked to a future visit, or left requiring action.

Suggested reason-for-call tags

- Store hours / location
- Directions / parking
- Stock availability
- Size / fit question
- Wide feet / comfort
- Returns / exchanges
- Care / washing
- New arrivals
- Restock request
- Styling help
- Assisted shopping
- Complaint / escalation

PHASE 1 INVESTMENT

Pricing for the Phase 1 London store pilot

A simple commercial entry point designed to help VIVAIA test the model with low friction. This package focuses on 24/7 call answering coverage, CRM capture, early fine tuning and clear reporting.

Phase 1 pricing

£600 /month

for a 24/7 AI answering service package for the London store

Includes 1,000 minutes per month. Additional usage is charged at £0.20 per minute.

Included in Phase 1

- 24/7 AI answering service for inbound London store enquiries
- 1,000 minutes included each month
- CRM system included to capture and structure customer interactions
- Automatic reason-for-call tagging and enquiry categorisation
- 2 weeks of fine tuning after launch to improve accuracy and flow quality
- Reporting on enquiry patterns, intent signals and service performance
- Additional minutes billed at £0.20 per minute

The commercial purpose of Phase 1 is to give VIVAIA a low-friction monthly pilot that answers every customer query while building a valuable customer intelligence layer from day one.

What this pricing page helps communicate

- Low-friction pilot entry point for VIVAIA UK
- Immediate service value through 24/7 coverage
- Structured customer data through the included CRM layer
- Post-launch optimisation built in through two weeks of fine tuning
- Visibility for stakeholders through reporting and analysis

Offline store data capture + online retargeting

Once the voice and CRM foundation is in place, VIVAIA UK can expand from call-based capture into a broader store intelligence system. The goal is to capture richer offline store behaviour, understand those customers better and turn store traffic into measurable online remarketing audiences.

Phase 2 capture points

- In-store QR signups and assisted shopping capture
- Staff capture of product interest and fit needs
- Out-of-stock and size-not-available requests
- Try-on interest without purchase
- Event, launch and RSVP capture

Phase 2 outcomes

- Unified customer profiles combining calls and store interactions
- Audience segmentation by category, fit and purchase intent
- Online remarketing audiences built from offline behaviour
- Stronger understanding of the VIVAIA UK customer
- Better localisation decisions for future store and campaign growth

Phase 2 turns offline store traffic into a digital growth asset instead of a one-time retail interaction.

How the phased model works in practice

A

Phone enquiry

A customer calls asking about Mary Jane availability and size guidance for wide feet.

B

CRM tagging

The system captures identity, product interest, size concern and intent to visit the London store.

C

Store interaction

In Phase 2, in-store browsing or assisted fitting is added to the same customer profile.

D

Online retargeting

VIVAIA can later retarget this customer with relevant category creative, fit-focused messaging or restock campaigns.

Why this system creates long-term value

Beyond answering calls, this system gives VIVAIA a support model that is easier to scale, more reliable for customers, and far more useful from a data and growth perspective.

Never miss a customer call

Every enquiry can be answered, including after-hours and peak store periods.

Easy to scale as new stores open

The same framework can be rolled out across additional VIVAIA locations with less operational strain.

Better customer data

Each conversation becomes structured CRM data instead of a lost or untracked interaction.

More consistent customer support

Customers receive faster, approved answers instead of depending entirely on store staff availability.

Better understanding of customer intent

VIVAIA can see what customers are asking for, what concerns they have, and what products are driving interest.

Foundation for future remarketing

Captured store and call data can later support stronger segmentation, follow-up, and online retargeting.

In simple terms, the system helps VIVAIA answer every customer enquiry, capture better first-party data, and scale support more easily as more stores are introduced.

Practical value for VIVAIA UK

- Support can expand as more VIVAIA stores are launched.
- Store teams can focus more on in-store service instead of routine phone handling.
- Leadership gets clearer visibility into customer demand and service trends.
- The data foundation becomes more valuable over time as locations and interactions increase.

Recommended rollout, KPIs and next steps

Start with a focused London store pilot. This keeps the project low-risk, measurable and aligned to a live retail environment where customer intent is already strong.

WEEK 1

Discovery

Store FAQs, escalation rules, CRM fields, tone of voice and reporting priorities.

WEEK 2

Build

AI voice setup, knowledge base creation, tagging logic and CRM workflow design.

WEEK 3

Testing

Scenario testing, response refinement, brand review and escalation path validation.

WEEK 4+

Pilot live

Go live, monitor call themes, tune tags and establish a monthly insight review rhythm.

Core KPIs

Call answer rate

Missed-call reduction

Enquiry capture rate

Top reason-for-call categories

High-intent product enquiries

Escalation and resolution quality

Why this fits VIVAIA

- Premium customer experience without relying only on staff availability
- Structured first-party data from high-intent store conversations
- Sharper understanding of UK customer needs, fit issues and product demand
- Clear path from retail operations to future remarketing and retention

Recommended next step

Run a working session around the London store's live enquiry flow, top FAQs, escalation rules and CRM fields. From there, the Phase 1 pilot can be scoped with clear success metrics and a practical rollout timeline.
